View	config	Del
View	local	Del
View	weather	Del

Créer une database weather → une collection Paris

Puis lancer les processeurs NiFi.

Les données sont filtrées par le evaluate json, seul l'objet current est récupéré par le processeur pour être envoyé au serveur mongodb.

```
{"request":{"type":"City","query":"Paris, France","language":"en","unit":"m"},"location":{"name":"Paris","country":"France","region":"Ile-de-France","lat":"48.867","lon":"2.333","timezone_id":"Europe/Paris","localtime":"2020-11-15 14:06","localtime_epoch":1605449160,"utc_offset":"+1.0"},"current":{"observation_time":"01:06 PM","temperature":14,"weather_code":296,"weather_icons":["https://assets.weatherstack.com/images/wsymbols01_png_64/wsymbol_0017_cloudy_with_light_rain.png"],"weather_descriptions":["Light Rain,Rain"],"wind_speed":30,"wind_degree":200,"wind_dir":"SSW","pressure":1003,"precip":1,"humidity":88,"cloudcover":75,"feelslike":12,"uv_index":3,"visibility":10,"is_day":"yes"}}
```

Les données brut de la requete de l'api weather :

Les données filtrées envoyés sur le serveur mongodb

Mongo Express Database: weather Collection: paris Document 5fb1250f2ab79c003e58b3d9

Editing Document: 5fb1250f2ab79c003e58b3d9
